The following is an examiner's statement of reasons for allowance: Independent claim 1 requires a "method of transmitting medical diagnostic imaging over low-speed wireless networks to remote locations comprising the steps of: accessing an imaging modality; receiving an image from the imaging modality; establishing a wireless connection with a remote primary server; establishing a security layer over the remote connection; compressing the image; encrypting the compressed image; establishing an incremental file transfer of the compressed image over the security layer to the primary server; transmitting the compressed image to the primary server; decrypting the compressed image; decompressing the image; substantially losslessly storing the image on a storage device local to the primary server; accepting authenticated remote inbound requests for viewing the image; and sending the image to an authenticated requestor".

Independent claim 7 requires a "method of transmitting medical diagnostic imaging to remote locations comprising the steps of: receiving a DICOM data file on a client; parsing the DICOM data file for a data header, image descriptor, sync value and image data; establishing a secure connection between the client and a remote server; verifying an absence of a duplicate DICOM data file on the remote server; transmitting the DICOM data file from the client to the remote server responsive to the absence of a duplicate DICOM data file on the remote server". The remaining claims require similar combination of elements. None of the prior art whether taken singly or in combination discloses such combination of elements. The prior art references found are Huffman (6,925,208) and Dekel et al (6,314,452). These references fail to disclose the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
